SECTION II

REGULATIONS

1. DEFINITION OF A COOPWORTH

The Coopworth breed had its origins in the 1950's in the crossing of the Romney ewe with the Border Leicester ram to produce the F1 Border- Romney and the subsequent inter-breeding of them to give F2 and F3 generation progeny, which were then eligible to be known and registered as Coopworths.

Since the 1970's the base of the Coopworth breed has been widened to include sheep bred from white faced breeds other than the Romney.

The present (2008) definition of a Coopworth is a sheep of 75% Coopworth blood and 25% white-faced, white-woolled blood and with two generations of Sheep Genetics Lambplan recording system.

Any imported sheep must be recorded under the country of origins recognized recording system. E.g. New Zealand sheep must be recorded on Sheep Improvement Ltd.

2. ELIGIBILITY FOR REGISTRATION

- a) The foundation stock may be either registered (pedigree) or commercial. The regulations require that the sheep presented for registration shall have come from foundation stock with a good breeding history and have already been subjected to a high degree of selection based on recorded measurements. The breeder shall currently be recording with Sheep Genetics computing centre (Lambplan), or any other programme approved by Council, which applies ewe and sire summary and selection list data, to a progressive breeding policy.
- b) Sheep presented for inspection and registration must be within definition 1 and have been recorded for a minimum of one lambing, or be the progeny of recorded parents i.e. Accompanied by a two tooth selection list. Minimum acceptable performance requirement will be that a ewe has reared a reasonable set of twins, or
- c) The degree of eligibility may vary according to the known breeding history of the foundation stock and the degree of selectivity applied. Ewes submitted for inspection for registration shall be in the top 50% of their age group based on Lambplan Index percentile band, and recorded performance of fertility, growth rate, fleece weight, be physically sound, growing strong quality wool, and be an acceptable representative of the breed.
- d) Stock into which the "F" gene has been introduced, are not acceptable for registration.
- e) All registered breeders are required to have a Brucellosis free flock.
- f) Council may from time to time progressively raise the standards required for registration.

3. INSPECTION AND REGISTRATION

Every sheep in a registered flock or in a flock submitted for registration must be individually identifiable by ear tag or electronic device as to serial number, year of birth and flock prefix. These numbers must correspond to the breeder's records.

Breeders seeking initial registration shall apply direct to the secretary for an application form on which the breeder will give details of the history of the flock and the rams used. Subsequent inspection may be arranged by applying to the secretary or local inspector. The flock and the records will then be inspected and a report provided for Council. At inspection, the sheep shall have at least three months wool growth. Any costs of inspection should be born by the breeder.

All sheep not passed at inspection shall be positively identified by the owner as having been rejected. All objections by the breeder to decisions of the inspector must be made known to him/her and an appeal made to the Council within 14 days of inspection. The inspector may inspect all rams, ewes and hoggets.

A list of the sheep passed shall be prepared and submitted to the Council, and if the Council agrees, the flock duly registered. Once a flock has been registered there will be no further inspections of that flock or any future generations, unless otherwise directed by Council. Any breeder, who offers unregistered sheep for registration, will have those sheep and two further offerings inspected. Thereafter Council may give approval for sheep to be added without inspection. Any such additions must fulfil the conditions laid down in Regulation 2.

The minimum size of flock eligible for initial registration shall be 50 ewes if derived from an unregistered flock. Purchasers of ewes from a registered flock will have three years to attain 50 ewes, but are encouraged to increase these numbers to between 100 & 200 as quickly as possible to be able to apply adequate selection pressure, and establish good genetic linkages with other flocks.

To retain registration it shall be mandatory that every registered flock be performance recorded by Lambplan, and base selections on Lambplan records.

Sheep from a registered flock may be entered into competitive, maternal performance based showing, provided they are in natural condition and accompanied by display cards giving full productive history from Lambplan figures.

Ewes in the bottom 15 percentile band as at 15th January must be culled.

New breeders wanting to enter rams into the National Coopworth Ram Sale are to be inspected prior to nomination by any councillor or councillor nominated person.

Breeders who have presented rams in the National Coopworth Ram Sale which have not been presentable under the discretion of the council will be required to have an inspection the following year prior to nomination.

4. FLOCK PREFIX

Flock owners are required to submit to the Council for approval and registration, a prefix for their flock. The registered prefix shall be preserved for the use of the flock owner and

shall be used for all sheep born in their flock. The purchaser of a registered flock shall have no right to the previous owner's prefix or flock number without the written consent of the previous owner and approval of the Council.

5. RECORDING

Every Coopworth breeder must maintain high quality data under the Lambplan recording system to achieve ASBV's (Australian Sheep Breeding Values) according to Sheep Genetics QA manual.

Ideally, both sex's should be scanned and weighed as much as possible, and data recorded with Sheep Genetics promptly.

A minimum requirement is that every lamb (both sexes) is recorded for:

- (a) birth weight
 - i. DAB (Dead at Birth) & DRY (compulsory).
 - ii. flight distance (optional, but recommended).
- (b) weaning weight (up to 120 days before culling).
- (c) remaining lambs then be scanned for fat & eye muscle before 360 days.
- (d) all ram lambs be fully recorded to at least weaning.
- (e) WEC be recorded before 300 days, unless recording adult WEC

Adherence to the principles of good linkage both between flocks and between years within a flock should be followed.

6. DEREGISTRATION OF FLOCK

The Council reserves the right to inspect any flock and the records kept, and a whole flock can be deregistered if in the opinion of the Council, and on the advice of three inspectors, the standard of the flock, it's recording process, or any acts prejudicial to the breed, make the flock unacceptable to the Council, or if the rules and regulations of the Society are not being carried out both in spirit or in letter.

Every year, under order of Council, a number of flocks may be subjected to an inspection of records and/or sheep. The owner(s) of the flocks not meeting Society requirements, may receive assistance and guidance from Council. If Society requirements are not met the flock may be deregistered at any time.

7. FLOCK REGISTER

A flock register will be published annually giving a list of every registered flock and their histories.

Also listed from Lambplan records will be

- (a) the number of ewes mated per year
- (b) sires used by year, prefix and ear/electronic tag number (& number of progeny – if required)
- (c) number of ram & ewe lambs recorded
- (d) traits recorded by year
- (e) data quality grade (Gold, Silver, Bronze)

8. ANNUAL FLOCK RETURNS

Before the 31st May each year, the owners of registered flocks shall forward an annual flock return to the secretary on the Society's form.

PREFIX: "CASHMORE PARK". RECORDING SYSTEM: LAMBPLAN

The commercial flock commenced with the purchase of oaklea ewes in 1989. Multiplication of numbers involved exclusive use of single entered stud sires in the commercial flock. In 1994 the best 10% of commercial ewes were selected for registration, based on their 3 year pregnancy scan, growth rate and fleece weights. Those selected were all born as multiples and weaned 165% lambs in 1994. All ewe lambs have been mated since 1996, with 65% lambs weaned. Ewes are scored for flight distance and lambing ease, and wild sheep are culled. In addition, post weaning FEC samples are taken to improve parasite resistance. Lambing starts on 25th august annually, with lambs tagged for 4 weeks only. Culling of sale rams is heavy, with the best 40% offered for sale at the national sale and by private treaty. The flock is run at commercial stocking rates of 10 ewes/ha. With few supplements.

Three Oaks has been running a self-replacing Coopworth flock since 2003. These ewes have been bred true to type of the original Coopworths, being of moderate size with excellent fertility and good fleece weights. The stud was started from the best performing ewes selected for sound composition and constitution with the ability to perform on pasture. Ewes are joined for the purpose of breeding rams and replacement ewes.
